

ORIGIN: Ledger-Exclusive Ordinal Severity Grading

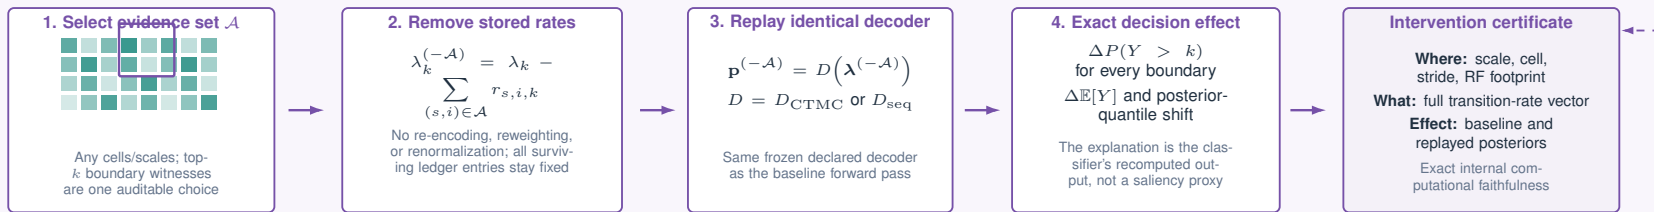

NO POOLED CLASSIFIER / NO BYPASS

Spatial evidence is the computation: bounded local transition rates $\rightarrow$ one conserved ledger $\rightarrow$ one declared ordinal decoder $\rightarrow$ one grade posterior.

a Ledger-exclusive prediction and audit path

b Exact same-circuit intervention certificate

Scope: evidence units are spatially indexed encoder cells with overlapping receptive fields. Replay is exact for the conserved ledger and declared decoder; the semigroup is CTMC-only. Neither implies pixel causality or lesion identity.
