

ORIGIN-v5: Generator-Exclusive Ordinal Prediction with a Semantic Receptive-Field Firewall

Ordinal Regional Intervention Generator Network (SRFF variant)

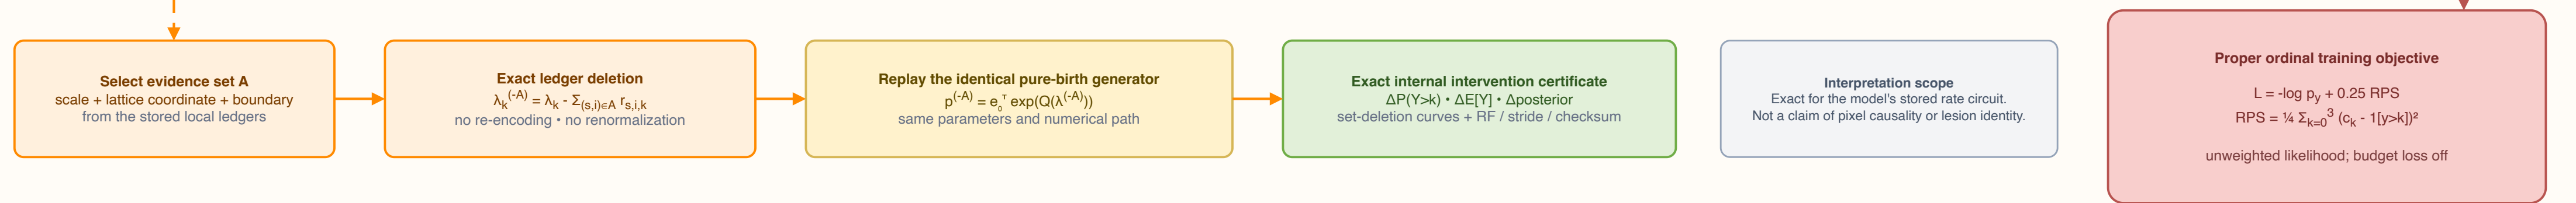

(a) Bounded-context encoder

(b) Generator-exclusive ordinal prediction path

(c) Same-circuit explanation and training

Structural guarantees: one prediction path • nonnegative local evidence • cumulative ordinal prerequisites • maximum evidence RF 344 px • deep cross-window mixing prohibited • exact stored-ledger deletion and replay • no global classifier bypass

— sole prediction path — immutable geometry — intervention / replay — training only
